## An intelligent approach to **24/7 power.**

Altus powered carts have the ability to power up technology components even while charging. The AC power system on both the Clio and ClioAir keep the workstations and clinician workflows optimized for their entire shifts.

### **Uninterrupted Workflow**

With the LiFePO4 45 Amp/hr. battery that is present on every Altus powered cart, caregivers can work with confidence knowing their workstation will last their entire shift. Clinicians and nurses alike are able to experience an uninterrupted workflow while helping their patients.

### **On-board Charging**

Using on-board charging through wall outlet power, the system powers both the technology components and recharges the battery simultaneously. On average Altus carts are recharged within 2 hours, so no cart is unusable for long periods of time.

## Introducing **ClioAir** 20% lighter, 3 times easier to roll.

The ClioAir is designed with the same powerful features as Clio, but even lighter. It utilizes the same LifePO4 battery to keep workflows uninterrupted. Both Clio and ClioAir feature 18" of sit-to-stand height adjustment, a one-piece design keyboard with a breakaway hinge, and secure technology storage.

ClioAir was engineered to be just as long lasting as our original powered cart. Built from die-cast aluminum, a long lasting battery, and an ergonomic design, ClioAir can handle any workflow a clinician may have for years to come.

**20%** — **&** —  
**LIGHTER**

**3X**  
**EASIER TO PUSH**
